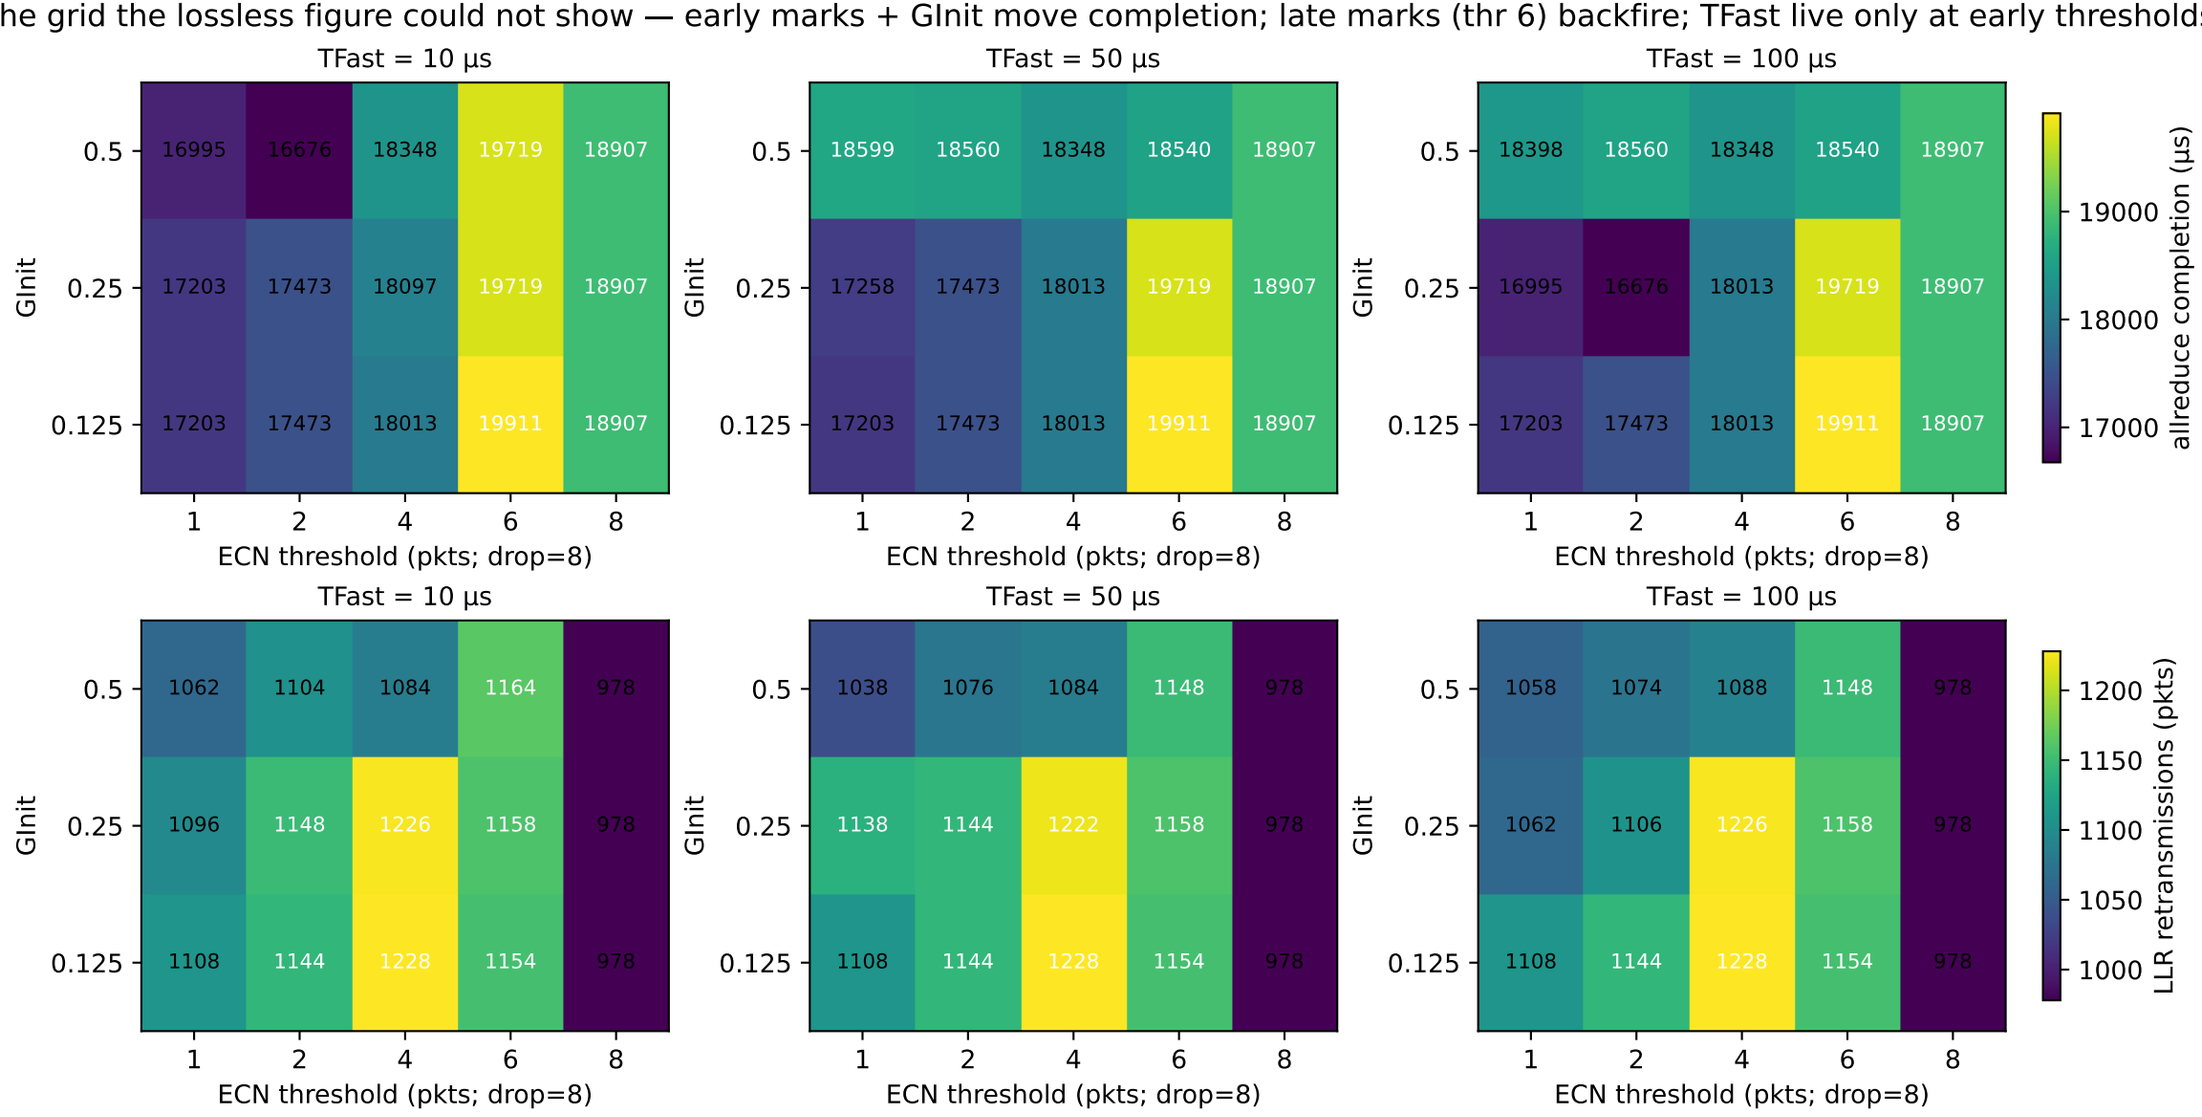
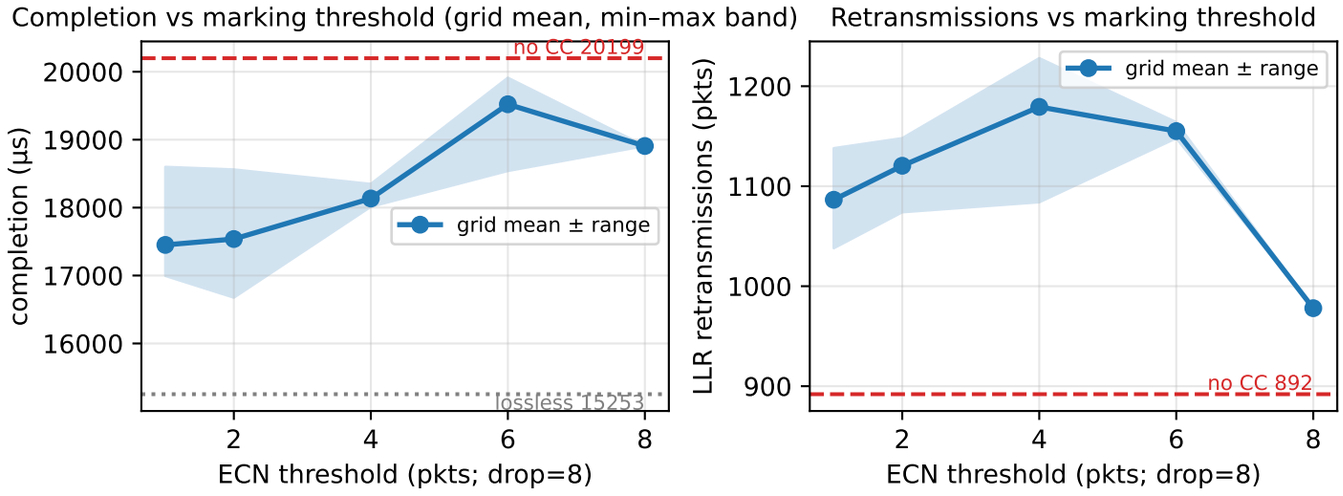
DCQCN parameter sensitivity in the lossy-RoCE (no-PFC) regime (drop=8, mark-before-drop):
he grid the lossless figure could not show — early marks + GInit move completion; late marks (thr 6) backfire; TFast live only at early threshold





Key numbers
lossless: 15253 µs
lossy no CC: 20199 µs (+32 %)
grid: 16676–19911 µs
(best recovers 71% of the drop tax)
best cell: ecn=2, GInit=0.25,
TFast=100 µs → 16676 µs
late marks (thr 6) WORSE than no marks
(thr 8): 19.3 vs 18.9 ms mean
TFast: 9 µs max swing
within a (ecn, GInit) column —
live only at early thresholds, flat at thr ≥ 4
